

Javascript: Immutable Copy

A javascript class named MyClass has three properties (a,b and c) and a method called sum().

Implement two additional methods:

- **getImmutableCopy**: return immutable copy of the instance, disallowing changes to properties a,b and c
- **isMutable**: returns true if the instance is mutable and false otherwise

Problem:

```
class MyClass {  
  constructor() {  
  }  
  
  sum() {  
  }  
  
  isMutable() {  
  }  
  
  getImmutableCopy() {  
  }  
}
```

Example usage:

```
const input1 = new MyClass(1,2,3);  
console.log(input1.isMutable()); // true  
console.log(input1.getImmutableCopy()); // true  
console.log(input1.isMutable()); // false
```
