

String filter - Priority using presentence word

Create a function to filter name from match presentence word

Example 1:

```
const names = ["front", "Frontend Development", "frontend developer",  
"frontend developer tutorial"];  
const input = "frontend";
```

```
function filterNames(nameLists, word) {  
  // code here  
}
```

```
const result = filterNames(names, input);  
console.log(result);
```

Output:

```
["Frontend Development", "frontend developer", "frontend developer  
tutorial"]
```

Example 1:

```
const names = ["front", "Frontend Development", "frontend developer",  
"frontend developer tutorial"];  
const input = "frontend developer";
```

```
function filterNames(nameLists, word) {  
  // code here  
}
```

```
const result = filterNames(names, input);  
console.log(result);
```

Output:

```
["frontend developer tutorial", "frontend developer"]
```
